

Mudita Moment Booklet

Hello, We are Mudita. Thank you for putting your trust in our product, a minimalist, automatic watch, Mudita Moment.

Thank you for choosing an analogue watch that reconnects modern form and design with traditional craftsmanship. Mudita Moment is a high-quality watch with a Japanese automatic movement, Miyota 9015. Celebrate a more meaningful lifestyle everyday, with the Mudita Moment, which will be your tool and reminder to slow down, reconnect and enjoy your time in a more mindful manner. We hope that you'll truly love the experience.

How to use it?

The watch is equipped with a Japanese automatic movement, Miyota 9015. It is automatically wound via the movement of the rotor whilst the watch is being worn. Only a few minutes of wearing the watch is enough to power the mechanism. It is also possible to manually start the mechanism after turning the crown a few times. To adjust the time, pull the crown out slightly until the seconds hand stops, then rotate it. Once you set the desired time, push the crown in, to start the mechanism. Allowing the watch to lie without movement for extended periods of time may result in inaccuracies. The watch's fully-wound mechanism has a 42 hour power reserve.

Accuracy

It is natural for an automatic watch to lose seconds. Attitude, magnetism, direct sunlight, excessively hot or cold temperatures or impact might influence the accuracy of a mechanism or potentially damage it. Apart from avoiding those factors, we recommend regular maintenance performed by local watchmaker every 2-3 years and service as needed. Treating the timepiece with care and properly maintaining it in good condition, ensures your Mudita Moment will last a lifetime.

Chemical agents and gasses

The watch should not be exposed to reactive or corrosive chemicals and gasses. Coming into contact with such chemicals may result in discoloration of the watch case, the crown or the watch straps. Corrosion of the watch case may also result, which in turn could affect the watch's impermeability.

Water resistance

Mudita Moment is water resistant to 5 ATM (it can withstand a pressure of 5 bar or water column of 50 meters). This means it is resistant to contact with water during everyday activities like occasional splashes of water or rain. However, we do not recommend that you shower, take a bath or swim with it on. Dry the watch with soft cloth if it gets wet. Do not adjust the time if you have wet hands or if the watch is not dried properly.

Watch strap

The watch strap should not be excessively tightened. To ensure proper comfort, it is recommended, when properly buckled, the strap should be loose enough on the wearer's wrist to allow for the insertion of a finger between the straps.

Technical specs - all technical info about the watch

mechanism:	Miyota 9015
case size:	Ø38 mm
case material:	316L stainless steel
kind of glass:	sapphire crystal
water resistance:	5 ATM
lugs bars:	with a quick spring bar movement
strap:	20 mm with a 316L steel buckle
